

Green Infrastructure & Waterfront Sustainability in Manhattan

Community Board 6

CB 6

Fund for the City of New York
Community Planning Fellow Lauren
Makar

Introduction

FUND FOR THE CITY
OF NEW YORK

Researching and highlighting possible green infrastructure opportunities and waterfront adaptive strategies that CB 6 may refer to for future Statements of District Needs and/or coastal resiliency projects.

A Look Back at **Manhattan CB6's** 197-a plan of 2008

May 2022

Kieran Micka-Maloy
Community Planning Fellow

Deliverables

- Interactive map of district's flood risks, DEP green infrastructure assets, and key vacant/parking lots that may be possible opportunity sites for green infrastructure
- Recommendations/ideas for green infrastructure & coastal resiliency that the CB may use in future statements of district needs and/or when assessing future development projects

Scope and Limitations

- Building off of previous fellow's look at CB 6's 197-a plan, which found a lack of sustainability and resiliency needs.
- Serve as a stepping stone for further GI, sustainability, resiliency considerations for future district development.
- Lack of environmental engineering knowledge
- Lack of data for flood risks with adaptive strategies in place

Part II: GI & Sustainability Recommendations

Prioritize the implementation of green infrastructure in areas at risk of flooding such as:

- East 21st and East 22nd Streets between 2nd and 3rd Avenues
- East 34th Street between the FDR Drive and 1st Avenue
- 3rd Avenue between East 46th and East 47th Streets
- 2nd Avenue between East 48th and East 49th Streets
- The block between the FDR Drive and Sutton Pl S & between 54th and 55th Streets

Part II: GI & Sustainability Recommendations - Examples

- **Prioritize the implementation of green infrastructure** in flood-prone areas for city-owned buildings/spaces such as schools, public housing, and city parks.
- **Encourage private property** owners within the district to **take advantage of the city's Green Infrastructure Grant Program and the Resilient NYC Partners Program** to receive funding for installation of green infrastructure on their properties.
- Pursue the implementation of porous and permeable pavements and other green infrastructure in vacant lots, parcels owned by the city, and spaces along and under the FDR Drive that are managed or owned by city agencies.

Part III: Waterfront Adaptive Strategies

- Currently no city resiliency plan for east side above 25th street
 - Possible appropriate adaptive strategies include revetments, bulkheads, waterfront parks, living shorelines, etc.

06. REVETMENTS

Revetments (also called "rip-rap") are shoreline structures typically made of stone rubble or concrete blocks placed on a sloped surface to protect the underlying soil from erosion and reduce the forces of wave action.

Ability to Address Coastal Hazards

EVENT-BASED	Storm Surge (High)	○
	Storm Surge (Low)	◐
	Wave Force	●
	Sudden Erosion	●
GRADUAL	Frequent Flooding due to Sea Level Rise	●
	Gradual Erosion	●

Applicability to Geomorphology Type

1	Oceanfront Beaches	○
2	Hardened Oceanfront Plains	●
3	Coastal Marshes	○
4	Hardened Sheltered Bay Plains	●
5	Oceanfront Slopes	◐
6	Sheltered Bay Slopes	●
7	Hardened Sheltered Bay Slopes	●
8	Sheltered Bluffs	○
9	Hardened Sheltered Bluffs	●

● HIGH ◐ MEDIUM ○ LOW

Part III: Waterfront Adaptive Strategies

03. WATERFRONT PARKS

Waterfront parks are open spaces designed with landscape features such as floodable areas, elevated land masses and other adaptive park design features that can quickly recover following storm events and help protect upland areas from coastal flooding.

Ability to Address Coastal Hazards

EVENT-BASED	Storm Surge (High)	●
	Storm Surge (Low)	●
	Wave Force	●
	Sudden Erosion	●
GRADUAL	Frequent Flooding due to Sea Level Rise	●
	Erosion	●

07. LIVING SHORELINES

Living shorelines are a bank stabilization technique that use plants, sand/soil, and limited use of hard structures to provide shoreline protection and maintain valuable habitat.

Living shorelines are an alternative to bulkheads or revetments that provide for a stable shoreline resistant to erosion while also providing for intertidal habitat and coastal vegetation. Living shoreline design remains an emerging field, and as such, what is often called a "living shoreline" can vary greatly and is a topic of much discussion among practitioners.

Ability to Address Coastal Hazards

EVENT-BASED	Storm Surge (High)	○
	Storm Surge (Low)	●
	Wave Force	●
	Sudden Erosion	●
GRADUAL	Frequent Flooding due to Sea Level Rise	●
	Gradual Erosion	●

Applicability to Geomorphology Type

1	Oceanfront Beaches	○
2	Hardened Oceanfront Plains	○
3	Coastal Marshes	●
4	Hardened Sheltered Bay Plains	●
5	Oceanfront Slopes	○
6	Sheltered Bay Slopes	●
7	Hardened Sheltered Bay Slopes	●
8	Sheltered Bluffs	●
9	Hardened Sheltered Bluffs	●

● HIGH ● MEDIUM ○ LOW

CASE STUDY: BROOKLYN BRIDGE PARK

Recommendations: Start with Waterfront Parks

34th St waterfront parking lot

Hunter's Point South Waterfront Park

Recommendations: Start with Waterfront Parks

Parking lot under FDR Drive E 18th St. - 23rd St.

Stuyvesant Cove Park

Key Resources

- Research, reports, maps, plans, data sets, etc. from NYC:
 - Department of City Planning
 - Department of Environmental Protection
 - Mayor's Office of Climate Resiliency
- CB6's 197-a plan and Statement of District Needs; Other CB's 197-a plans and Statements of District Need
